

TEST NAME
HEPARIN DEPENDENT ANTIBODY
Epic Test Code: LAB304813

EXPLANATION: Werfen has notified us of a production delay for the next lot of **AcuStar HIT reagents**. To ensure uninterrupted patient care, we are temporarily changing our testing workflow effective immediately.

- Temporarily we will be sending samples to Quest Diagnostics.
- The current HIT test code in EPIC can still be utilized. The lab staff will change it to a Quest test code.
- We will be reinstalling HIT testing on our ACL TOP to bring the test back in house. Validation prior to implementation is required.
- Once the validation is approved we will send out another notification.

Quest Test Code: 15334 Heparin-Induced Platelet Antibody with Reflex to SRA, Unfractionated Heparin

REFERENCE VALUES: Positive samples will relex to SRA Unfractionated Heparin

SPECIMEN REQUIREMENTS: Red Top Tube

SPECIMEN STABILITY INFORMATION: Serum must be separated within 2 hours and frozen.

TEST TURNAROUND TIME: 1-2 Days
